

Engineering Notebooks for Formative Assessment (Resource Exchange)

Dr. Kerrie A. Douglas, Purdue University, West Lafayette (College of Engineering)

Dr. Douglas is an Assistant Professor in the Purdue School of Engineering Education. Her research is focused on methods of assessment and evaluation.

Prof. Tamara J. Moore, Purdue University, West Lafayette (College of Engineering)

Tamara J. Moore, Ph.D., is an Associate Professor in the School of Engineering Education and Director of STEM Integration in the INSPIRE Institute at Purdue University. Dr. Moore's research is centered on the integration of STEM concepts in K-12 and postsecondary classrooms in order to help students make connections among the STEM disciplines and achieve deep understanding. Her work focuses on defining STEM integration and investigating its power for student learning. Tamara Moore received an NSF Early CAREER award in 2010 and a Presidential Early Career Award for Scientists and Engineers (PECASE) in 2012.

Target Grade Level: 4-8

Engineering to Transform the Education of Analysis, Measurement, & Science

Project Description

The EngrTEAMS project has been developing a suite of 13 integrated STEM curricula for grades 4 – 8. The curricula are hands-on engineering design challenges that integrate mathematics and science grade-appropriate content, mapping to Next Generation Science Standards for engineering and discipline-specific standards. Each unit was inspired by a teacher and developed in conjunction with members of the EngTEAMS. The design projects in each unit vary in context and in terms of the mathematics and science concepts needed to create an adequate solution. Yet, within all the variation, each unit is an authentic engineering design challenge. The common design elements that cut across curriculum were specified in three overarching design competencies (Douglas, Moore, & Adams, 2016), each with specific objectives concerning the knowledge and practices that comprise the competency.

Design Competencies

Competencies	Objective	Students...
1: Students define the problem from the perspective of stakeholders. Students generate and then refine description of problem based on new information. Students engage in problem scoping (i.e., define the problem and needs, and then identify the knowledge, criteria, and constraints required for a desirable solution).	A	Gather information to examine the problem (ask questions to client)
	B	Explain the problem based on a synthesis of information.
	C	Explain why the problem is important to solve based on evidence.
	D	Identify the relevant end user.
	E	Explain the background knowledge needed to develop a solution.
	F	Explain criteria based on synthesis of given and found information.
	G	Explain constraints based on synthesis of given and found information.
	H	Revise the problem based on evidence found while developing effective solution.
	I	Communicate how their understanding of the problem deepened through the design process.
2: Students use evidence to develop an optimal solution. Specifically: develop possible solutions, evaluate solutions, implement, test, and optimize the solution.	A	Use evidence from problem scoping to generate multiple initial ideas for the design solution.
	B	Select potential solution through systematic evaluation of various solutions based on the problem.
	C	Implement potential solution.
	D	Test potential solution.
	E	Analyze test results.
	F	Apply evidence gathered through test analysis to improve the performance of chosen solution.
	G	Gather additional information (i.e., regarding applied science/mathematics concepts) to improve solution performance.
	H	Evaluate the alignment between their proposed solution and the problem.
	I	Test improved solution.
	J	Explain what they have learned through testing and evaluation process.
3: Students communicate their design solution through use of evidence-based reasoning.	A	Justify why their design solution is appropriate based on application of core science/mathematics concepts.
	B	Justify why their design solution is appropriate based on information obtained in problem scoping.

Notebooks in the Curricula

Throughout the design project, each student maintains an engineering notebook in order to take notes, develop ideas, record testing and observations, document decisions, and plan next steps. Each of the 13 units has both common elements of the notebook and elements that are specific to that unit. The common elements of the notebooks are based on three overarching design competencies (Douglas et al., 2016) and then prompts are mapped to specific learning objectives and identified at which point in the design process students were developing those skills. In all these notebook assessment activities, students are provided with scaffolding for their design practices and how to provide evidence of their design process. Additionally, as students progress through their design projects, they are prompted to reflect and reconsider their understanding prior to collecting evidence.

Teachers can use the notebooks as an embedded assessment tool to provide timely feedback to students regarding design practices. The notebook prompts are written to capture evidence of student design skills, as specified in the design competencies. Students use the notebooks in a variety of ways to capture evidence of their design practices, such as brainstorming, sketching ideas, and recording their test results, as well as responding to questions concerning their design decision-making.

Examples from Engineering Notebooks

The following are examples of the common notebook pages in the EngrTEAMS curricula.

Define the Problem	Generate Ideas																				
<div style="text-align: right; margin-bottom: 10px;"> <small>LESSON</small> Name _____ Date _____ Period _____ </div> <div style="text-align: center; background-color: #4f81bd; color: white; padding: 5px; border-radius: 10px; display: inline-block;"> 2 </div> <div style="text-align: center; background-color: #4f81bd; color: white; padding: 5px; margin-top: 5px;"> 2.b. Define the Problem </div> <ul style="list-style-type: none"> First, on your own, answer each of the following questions beside the "My Response" space. Then, in your teams, share your response, listen to your teammates' responses, and discuss. Last, in the space "Team Response", write your revised answer to the question, based on discussion with your team. <ol style="list-style-type: none"> Who is the client?
